GUARDIAN^{PROTECT}

Data Backup, Protection and Server Disaster Recovery

GUARDIAN^{PROTECT} is a reliable and secure data backup and server recovery solution that addresses a business's requirements to provide secure and reliable automated data backup, complemented by the ability to recover failed servers in the event of a server failure or disaster incident.

Tape backup has been the traditional back up media for businesses for many years, but the technology used is now being surpassed by new routines and practices, as people become more aware of the inherent problems with tape backups especially when facing a site-specific disaster.

"Offsite backup is the new best practice for protecting business data and providing a scalable platform for I.T. Disaster Recovery."

GUARDIAN^{PROTECT} addresses two fundamental business technology requirements in one easy to implement and cost effective subscription based solution, with zero upfront capital investment.

Do you need Secure Remote Backup?

Secure offsite data backup is an essential element of any disaster recovery strategy. Most businesses rely solely on tape backups that are never taken off-site. Have you considered what happens if there is a fire, flood or theft and the tapes are destroyed or lost? Are the existing backups monitored and data on the tapes checked? Did you know that 70% of businesses that suffer a major data loss are out of business within 18 months? We've even seen backup tapes inserted and replaced without having any data written to them! So simply, the answer to the question is "yes you do" and GUARDIAN^{PROTECT} is the perfect answer.

	GUARDIAN Protect	GUARDIAN Protect SDR
Scheduled, Automatic Local Disk-Disk Backups	●	●
Offsite Data Replication	●	●
Complete Server Protection: OS, Data, SQL, Exchange	●	●
Agent-less Backup No need for Exchange or SQL agents	●	●
High Speed Backup with Compression & Encryption	●	●
Hardware Independent Restore Technology (HIR)		●
Server Disaster Recovery Access to virtual "recovery" servers in the event of a server failure or disaster event		●

Benefits offered by GUARDIAN^{PROTECT}

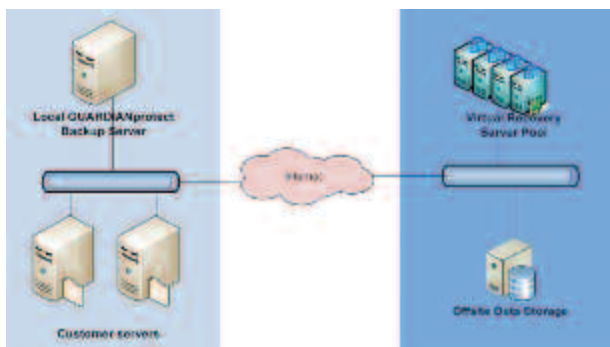

- No upfront capital investment required
- GUARDIAN^{PROTECT} uses bit-level technology that only backs up the changes within files optimising backup performance.
- No need to worry about taking backup tapes offsite or paying a provider to do this for you.
- Never again experience the problem of tape errors when trying to restore data.
- "We fit, you forget" policy that means that you can have complete peace of mind that your backups are managed.
- Quick time to recovery with GUARDIAN^{PROTECT} SDR

Offsite Data Backup

GUARDIAN^{PROTECT} eliminates the use of ageing tape-based backups by employing disk-disk backup technology to increase the speed and reliability of data backup activities. Backups are completed nightly to the local GUARDIAN^{PROTECT} backup server and then replicated to our secure offsite datacentre - so it's always available, even in the event of a local disaster. Replicated data is encrypted so there is no need to worry about unauthorized access to your data.

Recovery tools available on the local GUARDIAN^{PROTECT} backup server provide quick and easy recovery of data without the need to hunt for the correct tape!

Typically, data retention policies are set to maintain between one and three months of daily backups, although this can be defined to meet your company's individual requirements.

Server Disaster Recovery

Historically, many companies looking at backup and recovery strategies focus their attention on the backup process, implementation and training, when what is critical is the recovery process. How easy, how fast and how reliably can you recover production systems and data after a crash or failure? These are the questions that you should be asking.

In the event of a server disaster that means you cannot access one or a number of your protected servers, GUARDIAN^{PROTECT} SDR provides the ability for us to recover your servers to a virtual environment to which your users will be able to access their information and applications.

GUARDIAN^{PROTECT} SDR provides access to your "recovered" servers within 24 hours of a disaster and guarantees that your data is no older than 4 hours from the point of incident.

Other GUARDIAN services from Solsis

GUARDIAN^{MIS}

The GUARDIAN^{MIS} service provides a fully managed infrastructure support service to provide you with complete peace of mind at a predictable fixed cost. Solsis will fully manage and proactively maintain your infrastructure improving user productivity and reducing the cost of technology to your business. The ultimate package for stress-free IT!

GUARDIAN^{TALK}

GUARDIAN^{TALK} is a feature packed VoIP telephone system providing your business with all of the benefits of the very latest telephony systems without the traditional upfront capital investment. For a fixed, per user monthly subscription fee, Solsis will supply the phone system, networking equipment, installation and support required to bring your businesses telephone system bang up to date
