

## Tidalwave Ltd

Great things happen... when we work together

Tidalwave have been creating successful digital and response marketing campaigns for their clients for over a decade. They have an award winning track record for creativity and business performance that is unsurpassed by any of their competitors.

## Principle Technologies

- Structured Cabling
- Cisco Wireless Solution
- Roaming Office
- Office Relocation

## The Project

Solsis has worked as a close partner with Tidalwave for many years, often on demanding, time constrained projects such as upgrading from NT to 2003 in just 3 days following systems failure, with a six year old backup system. Solsis has delivered consistently, and now help manage a much faster and more resilient platform successfully. More recently Tidalwave has again called on Solsis' skills to help manage a complete office relocation in a small amount of time. This included 100% reliable and pervasive wireless access for staff and clients and future proof structured cabling with a scalable rack infrastructure, to help support subsequent deployments like Unified Communications.

## Benefits

The communications infrastructure of a business is critical to its continued success, and Tidalwave now have a flexible, scalable and easy to manage backbone that will increase productivity throughout the business.

Andrew Jarrett, IT Manager at Tidalwave states "the new Cisco wireless network is amazing; we've had wireless before but this can reliably and effectively support the entire business allowing us to be as dynamic and flexible as we need to be. No drop outs or bandwidth challenges – I'm happy."

## Solution

The Solsis solution involved the installation of a new rack infrastructure and termination and testing of 220 runs of CAT6 structured cabling in just over a week. Solsis also delivered a Cisco wireless network throughout the building. The Cisco Wireless LAN solution consisted of a platform with centralised management and distributed lightweight access points interacting dynamically to provide optimum RF coverage and data throughput. The Wireless LAN provides secure access for not only private, but also guest users, while the traffic is completely segregated to ensure heightened security.

## Why Solsis

As a long term partner of Tidalwave who have consistently delivered, Solsis were a key team member in consulting and recommending during the relocation. Solsis were able to demonstrate their experience in all of the relevant areas, and have helped to develop a roadmap for future investment.

**"The new Cisco wireless is amazing – it allows us to be as dynamic and flexible as we need to be – we're happy."**
